31st Annual Ranch Ready Production Sale
THURS., FEB. 4, 2021
1:00 p.m. (MT) • At the Ranch

SELLING: 48 Coming Two-Year-Old Bulls
(A two-year-old bull has more longevity and can cover more cows than a yearling bull. These bulls are cake broke and ready to go to work for you.)

10 Bred Registered Hereford Heifers
(Bred to Black Angus bulls)

15 Bred Commercial Heifers
(Bred to Black Angus bulls)
Dear Cattlemen and Women:

Stroh Hereford Ranch would like to cordially invite you to our 31st Annual Ranch Ready Production Sale on Thursday, February 4th, 2021 at 1:00PM Mountain Time. The ranch is located 1.5 miles east of the Killdeer Roundabout on Highway 200 or 5 miles west of Dunn Center. Wow what a year 2020 has been! We have seen fluctuating cattle markets, a pandemic, and dry conditions this fall/winter for many of us. This will be a year that we will tell our grandchildren and great grandchildren about.

Over the years we have seen trends come and go, but our goal has always remained the same. Our goal is to improve upon our genetics in order to provide our customers with a selection of bulls which meet the needs of today's modern ranches. This year's bulls have the same ranch ready look about them; they are long, thick, deep, and rugged. They were raised on North Dakota prairie and mommas milk till weaning day. Once the bulls settled down after weaning, we started them on a low energy high roughage diet. This low energy high roughage diet did not include any grain, this reflects why the yearling weights are so low. When we made the ultimate decision as to which bulls would be in the sale, we looked at those bulls that we were able to identify as the "easy keepers"; thus giving you, the producer an animal that will add value to your bottom line. The quality runs deep from top to bottom, and we strive to deliver a uniform set of bulls that aren't all fluff. This is because we want our customers to know what they are getting and that their expectations can be met!

In today's cattle market the baldy steer is of more value than ever. Keep in mind the following facts about using a Hereford Bull on Black Cows:

1. Black baldy calves are sought after by a number of quality beef programs.
2. Hereford genetics maximize the value of your herd by adding a 7% higher pregnancy rate.
3. Using a Hereford Bull on a Black Angus cow will bring you $51.00 more per cow per year.
4. Hereford genetics give you a $50.00 advantage in feedlot profitability.
5. Also keep in mind that premiums are now being paid for red and black baldy females.
6. Hereford genetics can add docility to your herd.

Our vaccination program is as follows: before we turn out in the spring our calves are given BoviShield Gold-One Shot and UltraBac. At branding the calves are dewormed. The calves receive booster shots in the fall and are once again dewormed. Our cows are vaccinated before we turn them out for breeding with PregGuard Gold 10 in the spring. The bulls are fertility tested in the spring and they also receive PregGuard Gold 10. This year’s sale bulls were poured in December.

On sale day the bulls will be sale ready, not butcher ready, or Denver Show Ring ready, or bulls that did not sell in last year’s sale. They are developed on a forage diet for soundness and longevity purposes. As always to help with gentleness the bulls and the heifers are cake broke. They have sufficient pigment and are phenotypically correct. Remember that a two-year-old bull can service 30% more cows than a yearling bull can.

We want to thank our past customers for their dedication and support. We know that without you we would not be here today. We also want you to know that when we buy herd sires for our herd, we take into consideration the things we have visited with our customers about in regard to what they are looking for in a herd bull.

We would like to invite you to stop in and look at the cattle prior to sale day. Should you have any questions please do not hesitate to contact us. We look forward to seeing you!

Sincerely,

Mike, Dawn, Lucas and Matthew Stroh

MARKETING PROGRAMS

HEREFORD ADVANTAGE
Use the Hereford Advantage program to increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% of the breed for the Certified Hereford Beef Profit Index (CHB$). Feeder cattle enrolled in this program, through IMI Global, must also be source and age verified, have current BQA certification and vaccination program documentation.

MATERNAL ADVANTAGE
The Maternal Advantage program generates commercial replacement females with added longevity, more docility, increased fertility and more profit per year. Participating herd bull batteries must rank in the top 50% of the breed for Baldy Maternal Profit Index (BMI$) if used on British-based cows or the top 50% of the breed for Brahman Influence Profit Index (BIIP$) if used on Brahman-based cows.

PREMIUM RED BALDY
Premium Red Baldy is designed to take advantage of the best traits of both Hereford and Red Angus breeds and provide commercial producers with premium replacement females. Females enrolled in the program must be sired by bulls in the top 50% of the breed for BMI$ if Hereford or Profitability and Sustainability Index (ProS) if Red Angus.

EPD’s are current as of 1/6/21
TERMS & CONDITIONS:

All cattle will be sold to the highest bidder without reserve. The terms of the sale will be cash. The auctioneer will settle any dispute as to bids.

Each animal will become the property of the buyer as soon as sold. Cattle will be cared for a reasonable length of time after the sale, at the buyer’s risk. Announced changes in catalog information sale day, take precedence over printed material in this catalog. Everyone attending this sale does so at his own responsibility and risk, and without liability on the part of the owner or his employees.

GUARANTEE:

All bulls of breeding age are guaranteed breeders. If an animal fails to breed after a trial of six months, it may be returned to the seller at buyer’s expense. The seller reserves the right to try said animal for six months and if it proves a breeder to return it to the station of buyer at seller’s expense. If the animal proves to be a non-breeder it will be replaced with an animal of equal quality or credit will be given for next year’s sale.

We assume no liability legal or otherwise to make any further compensation to the buyer no other warranty of any nature is expressed or implied.

Extreme care has been taken in copying each pedigree to avoid errors. We are not to be held responsible for any error which might appear and which is beyond our control in the printing of the catalog.

DELIVERY:

Deliveries will be made on purchase of $3500 or more to central points up to 400 miles. We will cooperate with buyers on delivery of all cattle regardless of number or distance. No delivery provided for heifers.

ABSENTEE BIDDING:

Anybody wishing to bid that cannot attend the sale may place a phone bid by contacting any listed sales representative, (Will Bollum, Tony Heins, Kevin Murnin and Jill Hotchkiss), Mike Stroh, Matt Stroh or Scott Weishaar.

KILLDEER ACCOMMODATIONS:

Cobblestone Hotel & Suites, 701-764-2200; Mountain View Hotel, 701-764-5843.

We will cooperate with delivery arrangements or take $50.00 (per bull) off if picked up on sale day (Bulls Only)

Click the “Auctions” tab.

We will cooperate with delivery arrangements or take $50.00 (per bull) off if picked up on sale day (Bulls Only)
CALVING EASE DIRECT (CED) – CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in female calves at 2 years of age. For example, if sire A has a CE EPD of 6, then you would expect on average if comparably mated, sire A’s calves would calve 6% lighter at birth when compared to sire B’s calves. Sire B would have an 8% more likely chance of being unassisted when compared to sire B’s calves.

BIRTH WEIGHT (BW) – BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A’s calves would withstand 3 lb. heavier at birth when compared to sire B’s calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

WEANING WEIGHT (WW) – WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 100 and sire B has a WW EPD of 70, then you would expect on average if comparably mated, sire A’s calves would wean 30 lb. heavier at a year of age when compared to sire B’s calves.

DRY MATTER INTAKE (DMI) – The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B’s progeny, if comparably mated, to consume on average 1 pound of feed less per day.

SCROTAL CIRCUMFERENCE (SC) – Measured in centimeters and adjusted to 365 days of age. SC EPD is the best estimate of fertility. It is related to the bull’s own semen quality and quantity, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a 7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than sons of a sire with an SC EPD of 0.0. If a bull has an SC EPD, analysis of a multiple-trait model was used for scrotal circumference. Weaning weight was used as a predictor variable to increase the prediction accuracy of SC EPDs. Therefore, an animal with a weaning weight EPD should also have a SC EPD.

SUSTAINED COW FERTILITY (SCF) – The AHA’s new Sustained Cow Fertility EPD (SCF) is a prediction of a cow’s ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving’s to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 SCF EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a 20 SCF EPD. In other words, the daughters from a bull with a SCF EPD of 10% would have a 10% higher probability of having one more calf than the bull with a 20 SCF EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

MATERNAL MILK (Milk) – The milking ability of a sire’s daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires’ daughters progenesis due to milking ability. Daughters of a sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

MATERNAL MILK & GROWTH (M&G) – Maternal Milk & Growth reflects what the sire is capable of doing for his daughters. It is a composite trait that reflects genetics through weaning and genetics for milking ability. It is an estimate of daughters’ progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull’s daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is one-to-one equal to the sire’s weaning weight EPD plus all of his MM EPD. A sire with a M&G EPD of 10 lb. would sire daughters that are 10 lb. heavier at weaning than daughters of a bull with an EPD of two other EPDs. It is sometimes referred to as “total maternal” or “combined maternal.”

MATERNAL CALVING EASE (MCE) – MCE EPD predicts how easily a sires daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CED EPD of -3, then you would expect on average if comparably mated, sire B’s daughters would calve with a 10% more likely chance of being unassisted when compared to sire B’s daughters.

MATURE COW WEIGHT (MCW) – The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the cow’s maintenance requirements of a cow herd. An example of how the MCW EPD allows breeders to compare sires: If sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

UDDER SUSPENSION (UDDR) – Scores range from 9 (very tight) to 1 (very pendulous) and represent assessments of udder support. Weak udder suspension results in pendulous udders that make it difficult for a calf to nurse. Weak suspension in the udder increases the risk of udder infections. It is difficult to predict expected differences expected in the sires’ daughters’ udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

TEAT SIZE (TEAT) – Scores range from 9 (very small) to 1 (very large, balloon shaped) and are subjective assessments of the teat length and circumference. Oversized teats are
CARCASS WEIGHT (CW) – Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight to the carcass with each additional pound of gain. A sire with a CW EPD of 24 and sire B has a CW EPD of 64, then you would expect the progeny of sire A, compared to sire B, to have a half-score smaller teat size in daughters of sire A, compared to sire B.

RIB FAT (FAT) – The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

RIBEYE AREA (REA) – REA EPDs reflect differences in an adjusted 365-day ribeye area measurement. Higher REA EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

MARBLING (MRB) – MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMI$) – The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a positive weighting on Weaning Weight and Mature Cow Weight which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BII$) – The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef x Brahman is expected to produce lighter carcasses than Certified Hereford Beef alone. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

CARCASS PERFORMANCE INDEXES

The Certified Hereford Beef Sire of Distinction program recognizes Hereford bulls who excel in carcass traits. The American Hereford Association Board of Directors initiated the program in 2007 to to recognize superior carcass bulls. Qualifications - To qualify as a Certified Hereford Beef Sire of Distinction, a bull must be in the top 25% for the CHB EPD index and have an expected progeny difference of ≥ 0.60 for ribeye area (REA) and marbling (MARB) expected progeny difference (EPD). The Certified Hereford Beef Sires distinction is used to recognize sires in the Hereford breed that excel in improving carcass traits. A bull receiving the CHB status will be recognized with CHB after his name when doing an animal or EPD report.

Here is a large outlined, heavily muscled, deep sided Cooper bull. 3146A injects performance, muscle and maternal into a calf crop. As this comment is being written 3146A is in the top 10% of the breed for weaning, yearling, milk & growth and carcass weight. Well maintaining the rest of his maternal figures to be in the top 30% of the breed.

We are very excited to bring this bull into our program. He brings a lot of length, width and muscling to the table! This guy is a true power house phenotypically and genotypically especially when you take a look at the maternal figures 57 on milk & growth and 27 on milk! We look forward to the impact he will have on our program in the years to come. 6194 has tested free of all genetic defects including Mandibulo-facial Dysostosis this was verified through genetic testing in conjunction with the AHA for breed improvement.

Here is a bull straight out of the high desert. He’s long and thick with loads of eye appeal. He has a strong genetic package that we feel will complement the line-one genetics we have been incorporating over the years. The hopes are that this bull’s progeny will allow us to offer an outcross without sacrificing the need for maternally oriented high performing cattle.

Where do we start on this exceptional blending of 432B and 359W? This guy right here is as stout as a defensive lineman, and as easy moving as they come; all tied together into a cowboy’s kind of package! At the time this comment was written he qualifies for the CHB which will help add value to the feeder calves you produce! 910 is truly a candidate for any working ranch!
This is what we have come to expect from the 3146A progeny, long deep and stout in design! He is extensive in his type and has the ability to sire top notch feeder calves without sacrificing the need to create mother cows that are true converters of grass to pay weight.
Here is a great Trust 622 X Rancher combination! That falls into the cowboy’s kind category. Rugged in design, athletic and long, not to mention the muscle he carries. He has a phenomenal cow behind him that has never missed on creating a solid bull. Dam 119 has fired and put 5 out of 5 bulls in the sale. She is a sure shot brood cow that sets the bar high here on our prairie and her descendants are no different. 920 qualifies for a number of value added programs such as the CHB, Premium Red Baldy and Maternal Advantage Programs, which makes him a true candidate to help propel anyone’s program to the next level.

Group of cattle shown at the 2018 All Breeds Cattle Tour.

The crowd at Stroh Hereford Ranch during the 2018 All Breeds Cattle Tour.
Here is a neat bull, “Ruger” is the kind that is designed to work in a variety of environments; from the badlands of ND to the high deserts of this great nation. He is a smaller framed thick type of a bull that falls into the cowman’s deluxe category; dam 615 is a small efficient Rancher daughter that raises the right kind for today’s volatile market place!

Here is a highly athletic bulls that has the get up and go to cover ground and cows! Dam 157 left a mark on the program!

Now there’s a bull to put some marks on! This bull is long spined deep made and easy fleshing! This ranch ready bull should be at the top of everyone’s list! This guy checks off a lot of boxes every rancher desires when looking to make powerful cows! He indexes well in maternal categories earning a ranking in the top 5% of the breed for sustained cow fertility! Dam 464 is a phenomenal 112Y daughter that brings good ones in off of the rugged North Dakota’s short grass prairie!

THE BALD-FACED TRUTH
ABOUT HEREFORD GENETICS

Take advantage of hybrid vigor with Hereford genetics.

HEREFORD ADVANTAGE

Use the Hereford Advantage program to increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% for the CHB$ index.

MATERNAL ADVANTAGE

The Maternal Advantage program generates females with added longevity, more docility, increased fertility and more profit per year. Can be utilized by producers using Hereford bulls on British-based cows or Brahman-based cows in their breeding program.

PREMIUM RED BALDY

Premium Red Baldy is designed to take advantage of the best traits of both Hereford and Red Angus. Females must be sired by bulls in the top 50% of the breed for Baldy Maternal Index (BMIS$) or Herdbuilder Index (HB).

Don’t let this young calf fool you he made the sale for a reason! Whether it be his phenomenal muscle and athleticism or the ever important fact he has a tremendous momma cow to back him up!
This year we have a tremendous set of bred heifers to offer you! They all look to be queens of the prairie! These heifers are deep bodied, great spinal extension, phenomenal femininity, and above all the look of a momma cow.

These girls have been managed the same as the heifer groups in our previous sales. They have had low energy rations after weaning, were expected to gain on North Dakota grassland and breed up. They were breed to bulls we purchased from Schmidt Angus of Gladstone ND, and OPP Angus of Hebron ND. Bulls were kicked out July 3rd and pulled up September 1st.

All heifers have been bangs vaccinated and received a full line of animal health shots since birth. They were vaccinated with Preguard Ten in the spring of the year before they went to grass. Heifers were ultra-sounded December 9th and determined to be safe with calf. They also received a shot of 7-way and were poured with Ivomec on ultrasound day. Heifers have been receiving free choice mineral from Prairie Nutrition Center and are being fed a high forage diet to help maximize their development. If you have any questions on these ladies call Mike at (701)-290-1191 or Matt at (701)-690-4860.
Here is a beautiful 553 daughter! Deep sided, carries herself well around the pasture and not to mention she indexes well in the maternal categories.

Here is a maternal powerhouse! That will set a standard when weaning calves in the fall.

Here is a female that will out work. She exhibits the traits needed to be at home on our range, well sprung and a beautiful feminine head with thickness where a cow should be thick! The Captain females are shaping up to be model brood cows not to mention the phenomenal Harley blood flowing through her veins.

Here is a nice feminine 2053 daughter with all the bells and whistles to be a tremendous mother cow! Dam 946 worked hard for us especially at 10 years old.

CED BW WW YW Milk M&G FAT REA MRB $BM $CHB $ -1.8 5.2 56 82 30 58 .014 .36 .19 224 125

It was hard to part with this girl. Dam 5161 put her first two sons into the sale and this, her third calf, has the same ranch ready female look to her! Long spined, smooth and the ability to forage in tough conditions.
REGISTERED BRED HEIFERS

First year these Scope daughters are available, so we started with a good one! Soft sided, free moving heifer with some great cow power behind her. Mother 369 is an AHA Dam of Distinction! This female has the ability to be a front pasture momma.

This 2053 x 140X combo is a sure way to add maternal and muscle into a mother cow. She indexes well in the maternal category.

According to The American Hereford Association (AHA), "A cow receiving the Dam of Distinction honor is a cow that meets the highest standards of commercial cattle production. The cow must do her job, but her owner must also manage the herd correctly to give her the opportunity to excel. Only a few active cows are recognized. All heifers have the potential to be a Dam of Distinction, but only a small percentage fit the job description of an ideal cow year in and year out. Females attaining the Dam of Distinction status are recognized with "DOD" after their names on the AHA website."
