February 27, 2021 @ 1 p.m.

61 CONSECUTIVE YEARS of ANNUAL PRODUCTION SALES

TEGTMEIER POLLED HEREFORDS

71556 609 Ave. • Burchard, NE 68323 ‖ 402-865-5805 • Cell: 402-335-0470
rtegtmeier@diodecom.net • *www.tegtmeierpolledherefords.com*

Dear Friends and fellow Cattlemen,

Welcome to our 61st year of holding the Tegtmeier Polled Hereford Production Sale on Feb. 27, 2021. As we prepare for out 71st sale, as some of the years we held two sales per year, and celebrate 70 plus years in the Hereford business, we want to say THANK YOU to all of our customers and friends for their support over the years.

What the past year, 2020, has been for our family. The Covid-19 pandemic started about our sale time last year bringing all the uncertainty and economic depression for everyone. Then in late July, my brother and partner, Roger, passed away unexpectedly and then a little over two weeks later, our nephew, Todd passed away. It's been a sad time for myself and our family as we continued on without them. The next page tells about Roger and Todd.

Our herd has been in existence for over 70 years now. Our goals are pretty much the same now as they were when we began, to breed cattle with moderate birthweights, that excel in growth and performance, to be highly maternal, have high fertility, to have strong carcass merit and have eye-appeal with sound feet and legs. You will also notice many of the bulls are designated with the Certified Hereford Beef logo. This CHB designation signifies that the bull is in the top 50% of the bred for producing feeder cattle that will excel in the economically relevant traits of gain, feed efficiency and carcass merit, when mated with Angus cows.

I also want to recognize and give special thanks to Jim Birdwell. After 37 years of being a great friend and mentor, and auctioneer for our sales, Jim has decided to retire. We used to kid Jim that when he quit auctioneering, that we would quit also. The Tegtmeier family wishes the best for Jim in his retirement.

With that said, we are extremely excited to have Jim's son, Joel Birdwell, as our new auctioneer. Joel has a lot of experience in the cattle industry and just recently served as the President of the American Hereford Association.

We hope you can be with us on Sale day, but if not, please feel free to stop by anytime to view the cattle or call if you have questions. Live bidding is available on the Internet with Live Auctions. There is information on how to use this option included in the catalog.

Please come on Friday, Feb. 26th to view the offering. There will be food and beverages available. We look forward to seeing you.

Sincerely,

Russ Tegtmeier
402-865-5805 (home)
402-335-0470 (cell)

We look forward to Jim's son, Joel, auctioneering our sale!

Jim and Don Birk at the 1995 Tegtmeier Sale.

A special thanks to our friend, Jim Birdwell, for all of his hard work and dedication to our program.

Roger Tegtmeier
1947 – 2020

In Memory of... Roger & Todd Tegtmeier

This 61st edition of the Tegtmeier Polled Hereford Production Sale is dedicated to the memory of my brother, partner and owner, Roger Tegtmeier and to my nephew, Todd Tegtmeier. Roger dedicated his life to farming, ranching and helping develop Tegtmeier Polled Herefords. He helped our father, Clarence, in the '60's and '70's getting the cattle ready for the annual sales, consignment sales and shows and the management of the herd. Since Clarence's death in 1983, Roger shared in the breeding and management of the herd. He was also an avid horseman, breeding, raising and showing top reining horses.Todd, son of our brother Ron and Lois, lent a helping hand with the cattle, farming of our land plus conservation work when he had any time away from his own farming operation. He also worked as an equipment salesman at the John Deere dealerships in Marysville, KS and Tecumseh, NE.

Our family mourns the loss of Roger and Todd.

Roger passed away on Monday, July 20, 2020 at his home at the end of a busy day on the farm, doing the things he loved to do.

He was the second of four children. He spent his childhood on their family farm learning from his father. In junior high he was introduced to one of his passions, coon hunting with dogs. His other passion was horses. He then discovered reining after watching Bob Loomis ride.

On Nov. 24, 1968 he married Julie Bredemeier. They spent over 50 years together. Roger farmed and raised registered polled Hereford cattle with his brother, Russell. His sons, Tim and Sherman each picked up their father's passions.

Roger loved talking, riding and being around horses and dogs and their owners. He never met a stranger, no matter where he went, he would make a new friend, whether at a horse show or introducing himself to the neighbors while his son was moving to a new home. Roger also was never left the house without a snack in his pocket, most likely his favorite oatmeal raisin cookies or a bag of M & M's.

He is survived by his wife, Julie, sons, Tim (Kimberly) and Sherman (Sarah Jo), and five grandchildren, one sister and two brothers, his Aunt Verna Light and mother in-law, Jeannine Kamen. There are also many nieces and nephews, aunts and uncles and cousins who will miss him greatly for his humor and words of wisdom.

My heartfelt thanks to Joyce Entz for this poem she wrote and sent upon learning of Roger's passing. It is so very special to me.

"If I could choose the way to go
I'd choose the way my friend did go
To spend the day doing what I enjoy.
Then sit down to rest.
To fall asleep here on earth in an armchair
And wake up in heaven in Jesus' arms.
Oh, what a dream that must have been."

Todd Allen Tegtmeier
1971 – 2020

Todd Allen Tegtmeier was born on June 8, 1971 in Pawnee City, Neb. To Ronald D. and Lois A. (Svanda) Tegtmeier. He grew up on the family farm west of Burchard and his love for farming was apparent from an early age. He attended Lewston Consolidated High School, graduating with the class of 1989.

Following high school, Todd attended Southeast Community College – Milford. He started out in the auto mechanics program, but quickly learned that was not for him, and switched to the John Deere program instead.

Todd spent the majority of his professional life as a salesman at Oregon Trail Equipment (now LandMark Implement) in Marysville, Kan. He also worked for Dummermuth's Implement and Marshall County Equipment in Marysville, and for a brief time at John Deere in Tecumseh, Neb.

However, in 2016, Todd made the decision to do what he loved full time. He loved nothing more than to spend full days in the field, planting and harvesting. Todd spent numerous hours tending to cattle and row crop with his mom and dad. He had a passion for conservation work and was committed to being a good steward of the land. If there was anything Todd liked, it was to keep busy. In addition to the farm work, Todd enjoyed hauling various kinds of equipment across Nebraska and the Midwest. He also did a number of odd jobs for others for "grocery money".

Never one at a loss for words, Todd had a story for everything and always knew how to turn a phrase. He had a great sense of humor and never failed at making people laugh. He was, at all times, a man of his word. Todd will be missed by all who knew him. Todd is survived by his parents, Ron and Lois Tegtmeier, brother, Trent and sister, Shawn.

Sale Terms and Conditions

1. Terms – Cash or Check. Each animal to be sold to the highest bidder. The auctioneer shall settle any dispute as to bids.
2. All cattle are to be paid for by the purchaser during or immediately after the sale unless other arrangements have been made prior to the sale.
3. Each animal will be the purchaser's risk immediately after the animal is sold. They will be fed and cared for free of charge for a reasonable length of time after the sale but at the purchaser's risk.
4. All cattle will be sold in compliance with the health laws of the state of Nebraska.
5. Breeding Guarantee – All bulls and females are guaranteed to be breeders if given proper care. Heifers pronounced safe in calf by the veterinarian shall be considered breeders without any further guarantee. Any animal failing to breed within five months may be returned to the seller if in as good condition as when sold. The seller reserves the right to try said animal for five months. If the animal proves to be a breeder, the owner gets the bull at his expense. If it fails to be a breeder, an exchange will be made or his money returned.
6. All persons who attend the sale do so at their own risk. Owner assumes no liability, legal or otherwise, for any accidents which may occur.
7. Bids may be sent to any of the sale staff.
8. Please be assured if you buy cattle we will take care of them for a reasonable length of time, especially where long distance travel is involved.
9. Owner reserves the right to make additions or withdraw any cataloged entries if they fail to meet our standards at sale time.
10. Announcements at the sale ring concerning the cattle will take precedence over statements in the catalog.

Bull Breeding Guarantee:

The bulls in this sale are guaranteed breeders. Semen evaluations, health reports, and all claims must be submitted in writing to seller within six months of the sale date at buyer's expense from a veterinarian. Seller shall have the privilege of trying the bull after return before any adjustments are made. Guarantee is void if evidence of improper management in caring for the animal or the bull's inability to breed is due to sickness or injury incurred after bull is sold.

Stand out with Proven Genetics

THE HEREFORD ADVANTAGE PROGRAM

Increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% for CHB$ index.

PROGRAM BENEFITS:

- ✓ EPD ranking summary
- ✓ Added market exposure
- ✓ Genetic improvement tool
- ✓ Access to AHA resources
- ✓ Get started at **HerefordFeederCattle.com**

Certified Hereford Beef Index(CHB$) is a terminal sire index that is built on a production system where Hereford bulls are used on Angus-based cows with a focus on feedlot performance and end-product merit. To qualify for the Hereford Advantage program, cattle must be sired by registered Hereford bulls with transferred ownership, and the Hereford bull battery must have a CHB$ value ranking in the top 50%.

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit ($) indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo. The current suite of Hereford EPDs and $ indexes includes:

Calving Ease – Direct (CE)
CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

Birth Weight (BW)
BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)
WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)
YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)
The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)
Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility (SCF)
The AHA's new Sustained Cow Fertility EPD (SCF) is a prediction of a cow's ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving's to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age twelve then the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)
The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)
Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)
MCE EPD predicts how easily a sires daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)
The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

Udder suspension (UDDR)
UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT)
TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)
Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)
The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)
REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better- muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)
MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldie Maternal Index (BMI$)
The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BII$)
The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHB$)
The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

Yearling Bulls

The five yearling bull calves were raised on their Hereford dams without creep feed until the last week of November when they were weaned with the rest of the calves. After weaning they were fed with the rest of the calves until the end of January 2021, when they were sorted off and fed seperately.

- Another bull sired by Winston. The Winston cattle are easy fleshing, good-doing cattle with a lot of maternal bred in them. This bull will sire good feeder cattle and excellent milking daughters.

LOT 5
CT Winston 47H

Fall-Yearling Bulls

The fall yearlings are managed differently than the coming two-year-olds. They do receive some creep feed during the winter to help them develop depending on weather conditions. They were weaned at the end of April of this past year and fed for about a month, and then turned onto grass for the summer. The yearling weights reflect these bulls being on grass until November 15.

- Here's a bull that we strive to breed for. Light birthweight, excellent growth, highly maternal and above-average carcass traits. Add the pigmentation, and sound feed and legs and you have what we want to breed here – total performance. This great bull hopefully finds himself in a purebred operation somewhere, but if not, he will sire a great set of crossbred calves.

SCHE

- A bull here with some performance and maternal traits from his excellent cow family.

Two-Year-Old Bulls

The two-year-old bulls were raised without creep feed and fed a high roughage ration from weaning to yearling. We feed for a moderate gain, and not for a maximum yearling weight or high carcass data. We think this is harmful to the bull's development and longevity. They were on pasture from May 1 to November 15, and have been since on a corn silage, hay and grain mix to sale time.

- This is one of the top bulls in the sale. A bull we should have pictured. His sire is one of Barber Ranch's elite sires. His ET dam is perfect uddered and comes from cows that raised some of our best calves in Miss Alpha 706 and Miss Chegre 111. Take a good look at him sale day.

- A bull sired by our calving ease bull, Agent. Excellent cow family behind this bull.

AI Reference Sires for Bred Heifers

The following heifers are bred to calve this spring. The heifers selling represent cow families that have excelled here in our herd for generations. They each have the potential to be a highly productive breeding piece in any progressive breeding program. This is an exciting group of females selling, plus, many are bred AI to very popular AI sires.
