

Thursday, December 8, 2022

Welcome!

Welcome to our annual sale. Every year we consider it a privilege to invite you to evaluate these cattle. They are survivors. We are bringing you a group of bulls born in a spring with the deepest single day snow in a long time and pastured in one of the driest summer months . We welcome and listen to suggestions and we think the slimmer bulls off test are the best footed we have had.

These bulls were warmed up slower to yearling weights this year and then put on GroSafe testing at SAREC. Ultrasound measurements are taken at the end of the test. We fed nothing but salt for the first month they were home. The bulls stayed out on grass in big pastures and came in mid September. I think they will look good when we video them and great by sale day. What really needs to be showcased is the uniformity and improvement in these cattle. We are selling better cattle with the a lighter ration and the carcass scans are significantly improved. This is about the improvement of an entire calf crop, not an individual. When you milk you will get some cream and we have some exceptional bulls coming to the top. We have some top RFI scores and outstanding ultrasounds for you. Our reference sires are competitive nationally and I think these bulls could do it anywhere.

We have been diligent in selecting calving ease focusing on cattle that are shaped right. As we move into our second heats birthweights do go up. We bred up over 90% this year at home. If you end up on a lease on the west side of I-25 you get to walk at least 32 miles on your way home in three different trips. Mother nature and good fortune had us summer all bred heifers and 96 pairs in beautiful Walden Colorado. We weighed and pregged everything we sent without a loss. We are very grateful for the use of the lease and care they had there. We PAP tested 84 heifers and are very pleased with the results. Wind and snow are death on bad bags we have to cull hard on it. Our udders are competitive anywhere and I don't like to milk. Dispositions are crucial here and they are gentle. We may sell the bulls on video instead of passing through the ring. I reopened halter breaking boot camp after a three year break, and everybody is broke to stand. My body ages but the difference is amazing.

Be on the lookout in Oklahoma City, as we are offering choice of our Long Haul females at the Cattlemen's Congress sale! In addition, we have a large group of heifers both bred and weaned this Fall, as well as commercial females for sale.

As our sale barn turned 70 last year, so our summer focus has been water and wells adding three new ones with tank facilities. Hats off to the guys from JC Berry on up to persevere with a vision and resolve to let us be here today. My dad's love for the people and the cattle in this business gave us a foothold you can't buy. Mom has always been an inspiration for all of us. Both she and Janice's mom are both well and in their early nineties'. Obviously I have great support beside and behind me and thanks to Janice and the family for all of it. Lander puts in many hours and Amy is a great resource. We intend to have these cattle look as good as we can and be honest about what they are.

We know you have many choices and thanks in advance for coming here. It is worth the drive.

See you sale day! Jay and Janice Berry & Family

Please note any EPD in the top 10% is noted next to each of those bulls' EPD traits

These cattle have adapted and have been PAP-tested well in Burns, Big Piney and Walden. If you make it there you can go anywhere. Our current sires have all been tested. All bulls have passed a breeding exam and our herd health is good. We stand behind these bulls to be sound breeders. Health papers will be provided to go anywhere.

Free delivery for \$4,000 purchase up to 300 miles and we cooperate on any delivery anywhere.

\$50 off on bulls picked up in a week. Internet bidding is carried by The Livestock Link.

The Berry S Selling 55 BULLS

*WE WILL RETAIN PARTIAL OWNERSHIP IN SELECT BULLS TO BE ANNOUNCED SALE DAY

Explanation of feed testing measurements

Bulls were housed at the University of Wyoming SAREC GrowSafe testing facility from April 15 through June 1, 2022. Bulls were trained to feeders and evaluated on an 80-day feeding study where individual feed intakes were measured. A backgrounding/growing diet was fed, consisting of cracked corn, ground alfalfa hay, corn silage and protein supplement. The ration was formulated for an estimated daily gain of 3.67 lb./day. Individual weight gain and feed intakes were collected on each bull.

Calculations included:

Overall Weight Gain – Two initial and final weights were taken on consecutive days, with the 2 day average used to calculate total gain during the 79-day feeding study.

Average Daily Gain (ADG) – Total weight gain divided by 79 days.

DM Intake – Actual feed intake measured for each individual bull, through the GrowSafe feeding nodes. Feed amounts provided in the table are adjusted to a 100% Dry Matter (DM) basis.

Feed:Gain – A measurement of feed efficiency, listed as the lb. of feed required to achieve 1 lb. of weight gain for each bull. This is calculated using the daily feed intake and ADG for each bull. A lower number indicates a more efficient bull (less feed required to achieve weight gain).

Gain:Feed – Also a measurement of feed efficiency, listed as the amount of weight gain achieved for each 100 lb. of feed consumed. In this case, a higher number indicates a more efficient animal. In other words, more weight gain was achieved per 100 lb. of feed consumed.

RFI – Residual Feed Intake. RFI is the preferred method of evaluating efficiency in seedstock animals because it is an efficiency measurement that adjusts for the size of the animal. Using traditional feed efficiency measurements (to select cattle) would cause you to indirectly select for larger animal size because larger frame animals tend to me more efficient. RFI is preferred because it is a feed efficiency index independent of animal size. RFI numbers refer to the comparison between actual feed intake vs. expected feed intake (based on the ration fed and animal size). A negative number is preferrable, indicating a more efficient animal that consumed less feed than predicted. Positive RFI indicate a less efficient animal that consumed more feed than expected.

Rankings and combined Ranking. All bulls were ranked based on ADG, feed efficiency and RFI, with individual rankings provided. A combined ranking was also included, which equally weights the bulls ADG, efficiency and RFI ranking, with bulls ranked on their combined scores. The #1 combined ranking would indicate a bull that had the highest combined ranking in all three measurements.

• He is an extraordinary blend of calving ease, mama cow builder, and herd bull maker. He was proven here with one in five calves registered by him born here and has outstanding progeny everywhere. He is the Hereford bull to use for maternal heterosis because his daughters are moderate in size, easy fleshing and very maternal. His birth to yearling spread is dramatic and we have stacked low birth weight and performance. Calving ease with carcass isn't easy to find and it is very rewarding to have partnered on a great sire like this. Eventually we will have to sell some daughters so let us know if you'd like to own one. Outstanding sire group with 20 sons.

• We jumped on the chance to own a deep bodied sire like this. When you ride the yearling heifers as a group you can see it without a tag. 2022Z was the lead off cow in Holden's 2019 Female sale. She is big bodied, deep sided, great uddered, and super stylish. 2022Z has exceptional EPDs and production record combined with a fantastic phenotype, udder quality, big time carcass strength and she is backed by the great HH Miss Advance 5139R donor cow. The females could be the gem of this deal. His individual carcass indexes were REA115 and marbling 137. First son topped SAREC composite for feed efficiency. He was proven in Cooper's donor pen last spring with eleven sons averaging \$22,600. Our top carcass group and 15 sons sell.

"Powerful 7156E son that is moderate, deep sided and heavy muscled. He's a good footed bull with nearly 100% pigment and as much top and thickness as any bull in the sale. Scanned a REA ratio (109) and IMF ratio (105). Dam is a top-end 215Z daughter that is a full sister to Holden Hereford's herd sire 420B." A direct quote from Cooper's catalog. His dam has top carcass stats and after a second calf crop the EPD profile is spectacular. He is checking all the boxes and holding the BW down. Early puberty and fertility look good. Top 1% WW, YW, and SC. Top 2% M&G. Top 4% REA and 30% Marbling. Six sons sell.

• This bull is masculine for a low BW calf. He has great shape and all 66 pounds of him came easy. Like the other Final Test bulls, he is in one piece, no ordering front middle or rear thirds on him. 220 and 33 were power cows so top 4% weaning and yearling ranks are not far-fetched. Top 5% milk, 6% marbling makes him attractive. All three indexes, including CHB, at or better than top 5%. Star material.

 He has exactly the head and body shape we are looking for in a calving ease sire. He has capacity and again absolute elite EPD profile. He holds his top up for a long bull and if he was a train we would have to name him. As a group Final Test have performance to add to calving ease. All three composite indexes are better than top 5%.

He is the only Dominator son this year as 829 was injured and we were tapping our new genetics. Aside from the meat wagon shape the Dominator sons have, look at his top marbling score in the entire group. Both growth indexes over 100 and his mom is another nice Long Haul stepping up and starting right. 129 and 508 both had extra dimension and thickness.

· He is this year's fire plug and a good one. This bull is chocked full of muscle with a wide base. Butt and nuts isn't a catchy nickname but it might stick. Nice big goggle eyes will catch your attention. His sister was the fourth heifer born this year. Grandam, 764, has an elite udder and perhaps the most striking phenotype of all cows. There is a beauty behind this beast.

• Special Edition would be a better name because there is extra everywhere here. Elite herd bull credentials and wonderful disposition are evident. Born 87 pounds he has WI 115, YI 117, REA 110, MARB 123. 4.52 ADG (third best) on test where he finished easy top half. 8392 has our first Super Advance. Dam third heifer born, grandma first heifer of her year says fertility. This bull stands on lots of timber and moves freely, maybe right past Dad.

He is very moderate in his frame but very stylish in his makeup. It is hard to believe
but Homebuilder's mom comes up on the bottom side of his pedigree (That's
longevity and consistency). Dam has an udder you could use a herd of and has
weaned 7 calves at 106. REA index 112 and three sons have averaged 108. Neat
and stylish are more notes on this flashy Advance son. Oldest and most proven cow
families are behind him. He has solid performance ratios and a nice big ribeye.
His mom is a DOD and deservingly so with replacement female production a big
possibility.

 Upper-class Can-Am cross where one of the very best marbling Canadian bulls (157K) compliments a great Line One ribeye bull. 7131 was an Al sire for us after toppina Coopers sale at 170,000. Best uddered of our old cows she had her tenth calf this year and her heifer is a keeper. Sensation daughter, 734, is one of our best. He's red to the ground with dark feet and is our extra dimension bull if you have cows that need a lift. REA index 114, WI 107, YI 107.

You won't find this polled pedigree anywhere. His dam could be our cover cow. Very feminine but bigger bodied cow that really milks with an awesome udder. His weaning and yearling EPDs are in the top 5 and 7%. Stout and strong topped he has both exceptional maternal and growth genetics.

• He comes from a big ribbed line of females and with his ruggedness will be able to make a calf crop stout. Each of the G3 sons have that end-to-end stoutness you will like. 4.26 lbs. per day on test and a 17 finish at SAREC will make him go fast sale day.

He is dark with extra pigment, which makes this bull easy to spot. He certainly has several more attributes that will help your herd. He will probably be best used as a herd sire on heifers. Dam 611 is at the top of our list for Pi daughters, both to view and witness their production. He should cover a lot of country and fire nicely on a set of black cows.

• What a great start for our pen of Super Advance sire group. He is an extra ribbed, long hipped bull with great extension and lots of growth opportunities. Watch his yearling weight EPD and all three of his profitability indexes. Extra dimension in this growthy range bull prospect who is deep flanked like his dad. He finished 18 in ADG with 4.09 lbs. a day. WI 110, YI 111, and a REA of 111 speaks performance in any language. 512 cow family is dominant here and he is ready for the challenge. Her 829 son was one of the best last year and she did it again.

 Super cool, straight topped, extra-long calving ease hard to find polled son of 8392. Extraordinary scan of REA 105 and 118 MARB puts him in the top 8% for ribeye and top 18th percent for ribeye. He is probably heifer safe as smooth as he is made but he can help any cow out. Dam is a pretty Right On daughter from a cow family that is very productive.

 The bull you have been waiting for, 697's fifth sale bull in a row. He is the SAREC leader in almost every category gaining 4.46 lbs. a day and finishing with a composite score of 4.33. This cow family is no stranger to success with past high sellers. Graves own a full brother to 697. Shaffer Livestock topped 21 sale with 697's maternal brother, 55G, with almost exactly these stats and he looks great today. He had a big REA index of 110 and with the consistency of the cow family deserves herd bull consideration. WI 109 and YI 102. He is stretchy, red to the ground with full piament.

 He is a moderate framed Long Haul son that you might overlook because he is young, but a stout made bull with body. The foremost dams get not much mention but are great underfed, heavy milking moms. His calving EPDs and crossbreeding indexes tell the tale on what valuable part he can play in your breeding program.
