HEREFORDS & ANGUS

WELCOME TO OUR 44th ANNUAL BULL SALE

We are proud to say that ours is a program that has stood the test of time. We firmly believe that the reason it has is because it is based on producing bulls for the commercial cattle industry. Bulls that are bred and developed with structural integrity and sound on their feet and legs. Our program is also based on multi trait selection with selection pressure for calving ease, maternal excellence and extra carcass merit. We have worked hard to inject additional marbling into our Herefords. This is very evident when you study our IMF values.

We continue to use all the tools available to propagate superior genetics. We have increased the embryo transplant of our program, especially with our Angus. We have spared no expense to bring in top end genetics into both breeds. Over 90% of the bulls are either produced by ET or AI, which allows individual selection for every mating. We have never wanted to be the biggest producer, but breeders that are recognized for quality. All cattle sell with enhanced EPD figures that assures you the most accurate figures available.

Commercial cattlemen should never overlook the value of crossbreeding and the many benefits of heterosis. Hereford and Angus cattle are the staple of the western range. Black baldie females certainly excel in fertility, docility and fleshing ability. Their steer mates add consistency in the feedlot with tremendous gains and carcass superiority.

Our sale always ranks in the top 10 for average in the nation. We also show cattle to compare how our cattle compete with other top herds in the US. We have sold herd bulls that are now working in major herds throughout the nation. With that said, the majority of the bulls will sell within the reach of any progressive commercial operation. Last year, 62 bulls sold for \$4,000 or less and 108 bulls sold for \$5,000 or less.

We will have videos posted on all bulls prior to the sale. They can be viewed on our website at www.hereford.com.

We extend a special THANK YOU to all our repeat buyers through the years. We look forward to seeing you on February 26, 2024.

44th ANNUAL PRODUCTION SALE

MONDAY, FEBRUARY 26, 2024

starting at 12:30 p.m. (MST) | at the ranch, Bruneau, ID

ALL BULLS HAVE HAD THE FOLLOWING ...

- Two Clostridial 8-way Vaccinations
- Four Lepto Vaccinations

At birth: • Multimin 90

- Mid-March:**
- Inforce 3
 - Bovishield One Shot BVD
 - Ultrachoice 8

- Mid-May:**
- Bovishield One Shot
 - Long Range

- Three Deworming Vaccinations
- Three Lepto Hardjo Bovis Vaccinations

- August:**
- Bovishield Gold FP 5 L5
 - Ultra Choice 8
 - Endovac-Bovi

- October:**
- Bovishield Gold FP 5 L5 HB
 - BVD Tested Negative
 - Ivomec Plus injectable

- Six Respiratory/Reproductive Vaccinations
- Two Vibrio Vaccinations

- December:**
- Express FP 5 VL5
 - Dectomax Injectable
 - Ivomectin Pour On

- January:**
- Express FP 5 VL5
 - Ivomectin Pour On

OUR VACCINATIONS ...

We want our buyers to be aware that we are committed to herd health. We feel it's a large priority to insure that when you receive your bulls, they will be ready for service and free of any known transmittable diseases. A proper vaccination protocol will not only keep your herd healthy from sickness, but also play a huge part in reproductive soundness. Properly vaccinated bulls can also add longevity to your bull battery, as they will be less likely to contract diseases or death. On the left side of this page is a list of the vaccinations our bulls receive prior to sale. We also recommend that you continue with a vaccination schedule to insure your bulls stay up to date.

All bulls selling are BVD & Johne's free.

Colyer Herefords recommends the following to continue a vaccination schedule in the Spring or Fall after coming off cows.

- Bovishield FP5 VL5 HB
- Ultra Choice 8
- Wormer Ivomec Plus or Dectomax or Long Range

31058 Colyer Road, Bruneau, ID 83604
GUY: 208-845-2313 • cell: 208-599-0340
KYLE: cell: 208-250-3924
email: guy@hereford.com • www.hereford.com

SPECIAL OFFER

We will give a \$50 discount on any animal picked up within two days after the sale.

ONLINE BIDDING

If you are unable to join us on sale day, the auction will be broadcast on www.liveauctions.tv. Live audio and live video will allow buyers to bid on animals just as if they were present at the sale. It is recommended you preregister at www.liveauctions.tv prior to sale day to obtain a buyer number. A high-speed Internet connection is required for viewing and bidding. Contact Katie at 208.599.2962 or tech support at 682.816.4900.

SELLING IN OUR 44th ANNUAL PRODUCTION SALE

Selling 286 Lots ...

- 132 Hereford Bulls
- 97 Angus Bulls
- 1 Hereford Flush Pick
- 250 Units of Semen
- 27 Open Hereford Females
- 19 Open Angus Females
- 5 Pregnancies

SALE TERMS & CONDITIONS

TERMS: Terms of the sale are cash unless prior arrangements have been made. When making settlement, please leave specific instructions in writing for transfer and shipping. Colyer Herefords reserves a ¼ in herd interest in all bulls in the offering.

SALE CONDITIONS: Each animal will be sold to the highest bidder. The auctioneer will settle any disputes as to bids, and decisions on such matters will be final. Each animal will be at purchaser's risk as soon as sold and will be turned over to the purchaser as soon as practicable after settlement. All announcements made from the auction block on sale day by the owner or the auctioneer will take precedence over statements in the sale catalog.

GUARANTEE: All cattle are guaranteed to be breeders. In case an adjustment is required, it will be made with a replacement animal of equal value to the animal in question or credit on the purchase of another animal.

NOTE: Everyone attending this sale does so at their own risk. Neither the owners or their employees assume liability, legal or otherwise, for any accidents which may occur.

DELIVERY: Free delivery to a central point on any \$5,000 animal or total purchase by one buyer of \$10,000 within a 300 mile radius or adjoining Canadian port of entry. A \$50 discount for any animal picked up within two days after the sale.

CONFERENCE LINE: A conference line will be available during the sale. Please call anytime prior to 11 a.m. the day of the sale to register and get a bidder number. You will be given a conference phone number and instructions to be on the phone during the sale.

SALE LOCATION

The ranch is located three miles Northwest of Bruneau. Bruneau is 20 miles south of Mountain Home on Highway 51. Bruneau is 63 miles from Boise, 100 miles from Twin Falls and 173 miles from Elko.

Spring 2023 Platinum TPR Breeders

Twenty-seven Hereford breeders achieved Platinum Total Performance Record (TPR™) Breeder status for spring 2023.

The Platinum TPR program was established in 2018 to recognize breeders who participate in the Association's Whole Herd Total Performance Records (TPR™) program that was implemented in 2001 to create a more accurate database and increase the value of Hereford genetics. The Platinum TPR Breeder is the highest level of achievement when it comes to complete calf crop reporting. Breeders must meet all of

the requirements of Gold TPR Breeder status plus genotype 85% of their calves with a weaning weight submitted.

The Platinum TPR Breeder awards are designated two times a year and are awarded each calving season. The selection of Platinum TPR breeders takes place during the process of loading each new run of expected progeny differences (EPDs) in January (spring) and July (fall). The criteria for Platinum TPR breeders will be evaluated two years prior to the award year. The following spring 2023 TPR awards reflect the spring 2021 calf crop.

The following Hereford breeders earned Platinum TPR status this spring:

ALABAMA

Dry Creek Farm, Pell City

ARKANSAS

Courson Farm, Hamburg
Triple S Ranch, Grannis

CALIFORNIA

Sierra Ranches, Modesto

GEORGIA

Roy Barnes, Marietta
Hardy Edwards, Winterville
Gary Hedrick, Marietta
Colton Pollard, Carrollton

IDAHO

Colyer Herefords, Bruneau

ILLINOIS

Warfel Family Farm, Casey

IOWA

Matt Woolfolk, Adair

KANSAS

Kroos Farms, Prague

TEXAS

Doyle Hereford Ranch, Wolfe City
Flying S Herefords, Dallas
GKB Cattle, Desdemona
Still River Ranch, Van Alstyne
Willis Polled Herefords, Emory

VIRGINIA

Deer Track Farm, Spotsylvania

WISCONSIN

Kevin Stork, New Richmond

WYOMING

Ned & Jan Ward, Sheridan **HW**

Become a Platinum TPR Breeder

Breeders must fulfill the following specification in order to qualify for Platinum TPR status:

- Herd inventory must be submitted prior to the date inventory surcharge goes into effect.
- Complete reporting of calving ease and reproductive status for each dam on inventory.
- Complete reporting of birth weights for each live calf recorded in the calf crop.
- Complete reporting of weaning weights for each live calf recorded in the calf crop.
- Complete reporting of yearling weights for each live calf recorded in the calf crop.
- Complete reporting of scrotal measurements for each bull calf in the calf crop with a recorded yearling weight.
- 85% of calves with a weaning weight submitted must be genotyped.
- Ultrasound data reported on 25% or more of the calf crop. **HW**

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and profit indexes includes:

Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)

The DMI EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a 0.7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at two years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if comparably mated, to be 15 lb. heavier at mature size.

Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)

CW EPD is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs, are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMIS)

The BMIS is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS)

The BIIS is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef® does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHBS)

The Certified Hereford Beef Index (CHBS) is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows where all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight and Marbling to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. In addition, there is a positive weighting for Rib-eye Area and a negative weighting for Back Fat to maintain desirable Yield Grades. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

The Power of Genomically Enhanced EPDs

The American Hereford Association (AHA) has embraced the use of genomics into their genetic evaluation by launching a first of its kind single step analysis that utilizes the marker effects of specific traits. Likewise, AHA is directly estimating accuracy values rather than approximating. The direct estimation of accuracy results in a more conservative value but a more accurate value than previous methodologies. The AHA is producing the most reliable genetic evaluation that is supported by Whole Herd TPR™ and genomics, which will give prospective buyers added confidence in purchasing young and unproven animals.

Buying animals that have a genomic profile incorporated into their Expected Progeny Difference (EPD) offers many advantages that allow for quicker breed and herd improvement. Below is a table showing the average increase in accuracy when buying a young animal with a Genomic Enhanced EPD (GE-EPD) versus an animal without a GE-EPD. Similarly, an effective progeny number increase is listed by trait that shows how many progeny equate to a genomic enhancement of a young animal (e.g. yearling). That's right, buying a young animal that has been genotyped is like having 2-17 progeny, depending on the trait. The proof gained on young, non-parent animals, through a genomic enhancement is valuable and greatly mitigates the risk and allows for more directed selection.

Each animal tested is recognized with the AHA GE-EPD logo.

AHA Trait	Accuracy Improvement	Effective Progeny Number Increase*
Calving Ease	0.09	17
Birth Weight	0.12	8
Weaning Weight	0.14	12
Yearling Weight	0.16	9
Scrotal Circumference	0.17	6
Mature Cow Weight	0.12	4
Udder Suspension	0.17	7
Teat Size	0.17	7
Carcass Weight	0.11	3
Fat	0.08	2
Rib-Eye Area	0.07	2
Marbling	0.10	3

* Effective Progeny Number Increase (EPNI)- EPNI is the difference gained for genotyped animals versus non-genotyped animals.

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Docility (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), is a predictor of a sire's genetic merit for milk and mothering ability in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

FOOT SCORE

Claw Set (Claw), is expressed in units of claw-set score. A lower EPD is more favorable, indicating a sire will produce progeny with more ideal claw set, which is toes that are symmetrical, even and appropriately spaced.

Foot Angle (Angle), is expressed in units of foot-angle score. A lower EPD is more favorable, indicating a sire will produce progeny with more ideal foot angle, which is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

CARCASS

The genetic evaluation produces a single set of EPDs for carcass traits where the units of measure are in trait format and analyzed on an age-constant basis.

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value Indexes, reported in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. Increased selection pressure on \$W increases weaning and maternal milk traits while increasing mature cow size.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals. Components for computing \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase, and market these animals on a quality-based carcass grid.

HEREFORD

An industry-changing program from the American Hereford Association and IMI Global to verify and add value to Hereford-influenced feeder cattle with superior genetics, health and management.

REQUIREMENTS

- **Source & Age verification**
- **Genetic merit**
 - Minimum of 50% Hereford genetics
 - Bull battery ranking in top 50% of breed for \$CHB index (bull battery average)
 - Bull ownership transferred (all bulls)
- **Vaccination program – two rounds of vaccinations pre-weaning (minimum)**
 - *Recommended minimum protocol:*

PrimeVAC™ 34
PREMIUM
BY MERCK ANIMAL HEALTH

- **BQA certification**

BENEFITS

- **Genetic improvement tool**
 - **Sire EPD and profit index summary**
- **Added market exposure**
 - **Free listing at HerefordMarketplace.com**
- **Enrollment cost - \$3.00/hd.**
(verification + eID tag)

Look for this logo in Hereford bull sale catalogs to identify sires meeting the genetic requirements for the Hereford Advantage program.

Take advantage of hybrid vigor by capitalizing on Hereford genetics.

The Maternal Advantage program generates females with added longevity, more docility, increased fertility and more profit per year.

Can be utilized by producers using Hereford bulls on British-based cows or Brahman-based cows in their breeding program.

Producers utilizing the program will have access to a sire EPD summary, added market exposure, replacement selection tools, genetic improvement tools and access to AHA resources, marketing and staff.

91% of the BULLS in the SALE meet these requirements for the MATERNAL PLUS logo.

Qualifications

- Producers must verify that eligible females are sired by registered Hereford bulls with transferred ownership.
- Participating bull batteries must rank in the top 50% of the breed for Baldy Maternal Index (BMI\$) if used on British-based cows or the top 50% of the breed for Brahman Influence Index (BII\$) if used on Brahman-based cows.

Belle Heir is currently in the top 10% of the breed for 13 traits. Rarely does a young herd bull surface that does so many things right for the industry. He has been used successfully on heifers providing calving ease and light birthweights. His calves show explosive growth and have structural integrity and extra pigment. The carcass figures rank him among the breeds elite. He is currently enrolled in the National Reference Sire Program. He so impressive to look at in the breeding pasture because of his massive build and his structural soundness. He has the extra pigment and dark red color that are demanded in today's industry. His first daughters calved in the spring of 2022 and they are very impressive. Nineteen sons and one daughter sell.

Awesome look and pedigree in this prospect. Dark red color with big red eyes. He is a maternal brother to Belle Heir and with chart topping IMF and CHB values. Genomics say he should be a easier calving sire while still staying in the top 2% of the breed for growth at both weight periods. He was the second high selling bull in our spring 2021 bull sale. Eleven sons and three daughters sell!

Barracuda was purchased by ABS Global and is quickly becoming one of the heavy used Hereford sires in commercial heifer breeding projects. We feel this bull has only touched what he is capable of accomplishing in his career. A truly unique breeding piece offering calving ease with strong maternal and end product value in a profit-focused package. This is a maternal legend in the making - his dam is the famed 4038 and his MGD is 1311. His maternal sisters were both the high selling open and bred heifers at the 2022 sale. Perhaps what makes Barracuda so rare is he ranks extremely high for growth and carcass weight but his daughters are still moderate and easy fleshing as he ranks in the upper 7% for mature cow weight. Thirteen sibs sell.

The most talked about young sire in the history of the breed and rightfully so. His first 27 sons averaged over \$8,500 in the spring bull sale. Forty two females have averaged over \$13,000 and a record selling female last fall sold for \$195,000. He has proven to be one of the most popular young bulls of all time and his first set of calves are among the breeds elite. After his first set of calves has been processed his CED has improved while his growth numbers are in the top 1%. He is in the top 10% for 12 economically important traits. His striking color pattern and being homozygous polled also adds value to his offspring. This will be one of the largest offerings sold by this great sire. Fourteen sons and two daughters sell.

This young sire proved to be very useful when calving and breeding replacement females this spring. He is out of a first calf heifer that made it straight to the donor pen. Use this one for under quality and calving ease but also his carcass values and look makes him a big time herd sire. Breeders around the country are excited about the calves by Key West. Seven sons and one daughter sell.

High selling bull in the 2022 National Hereford Sale at \$325,000 for 1/4 interest valuation. Guardian brings the power, performance, phenotype and carcass merit unmatched in the Hereford breed. 85 lb. birthweight, 924 act. WW, 964 adj. WW with no creep and weighing 1,315 lb. at exactly 10 months. Dam is a full sister to Belle Heir with a WWR of 108 on two head. Her individual IMF ratio is 152 and her first calf scanned an IMF ratio of 152 and ribeye ratio of 105. Grandam is by the \$600,000 Miles McKee and dam is the \$117,000 89T. She boasts an IMF of 124 and ribeye ratio of 103 on 24 progeny. The first bulls are being offered in this auction and we feel they are a very impressive group. Twelve sons and two daughters sell.

0195 was the 3rd high selling bull in our spring 2021 sale to Sommers Herefords in Wyoming. He has proven to be a great breeding sire and will get used more in our program. He has off the chart ratios when he sold making him one of the elite bulls to sell that season. 125 WWR, 111 YWR with a 205 IMF ratio. He ranks in the top 2% of the breed for Weaning, Yearling, IMF and CHB. Most impressive is the phenotype and look he passes on to his offspring. His first daughter sold for \$17,000 to GKB and was named overall Champion polled female at Reno 2022. He has been running on a ranch in western Wyoming and maintains his soundness and flesh very well. Six sons sell.

Owned with Sommers Herefords, WY.

TOUGH ON TOUGH WORMS, EASY ON CATTLE PRODUCERS.

INTRODUCING **VALCOR™**
(doramectin and levamisole injection)

Now you can achieve effective parasite control in one product, where before you may have needed two. Valcor (*doramectin and levamisole injection*) is the first prescription cattle dewormer with two active ingredients in one dose. It's never been easier to be tough. Get tough at ValcorTough.com.

IMPORTANT SAFETY INFORMATION: Do not treat cattle with Valcor within 15 days of slaughter. Not for use in female dairy cattle 20 months of age or older, including dry dairy cows; not for use in beef calves less than 2 months of age, dairy calves, and veal calves. Safety has not been evaluated in breeding bulls. Use with caution in cattle treated with cholinesterase inhibitors. This product is likely to cause injection site swelling; tissue damage (including granulomas and necrosis) may occur. These reactions have resolved without treatment. See Brief Summary of Full Prescribing Information on the next page.

The record-setting \$165,000 bull of the Fall 2019 SITZ Angus Ranch sale at Harrison, Montana. Rapidly becoming known as a low risk - high reward sire whose sons have topped sales across the nation for the past two years. He produced the \$500,000 record-setting bull of the 2022 Connealy Angus Spring Bull Sale and another \$165,000 son. This line of cattle are known for hoof quality and maternal excellence without sacrificing carcass merit. Eight sons and five daughters sell.

Powerhouse individual that combines an outcross, proven pedigree with great maternal design. Super thick topped and deep sided bull that transmits added substance, fleshing ability and muscle shape. Responsible for the most dominant sire line in the breed today for combined foot quality and hair shedding genetics including bulls like RESILIENT, INCENTIVE and DIGNITY. Proven foot quality ranking at the very top of the Main Sire list for combined Foot Score EPDs. Eight sons and one daughter sell.

We purchased this Stellar son from Sitz Angus in Montana in the spring of 2022. We felt he was the most impressive son of Stellar available with tremendous foot quality. He currently ranks in the top 3% for claw and 15% for angle. He is also in the top 35% for all indexes. Just as important is his impressive structure and powerful phenotype that a commercial cattlemen would really appreciate. We are excited about his offspring and he will continue to see heavy use in our program moving forward. Eight sons and one daughter sell.

One of the most popular Angus sires in the ABS lineup. He is described as a man amongst boys from a young age, combining tremendous base width and muscle with exceptional substance, rib shape and length of body. Dam is a 10 plus year old Pathfinder with a great udder and a nursing ratio of 112. His progeny are tearing it up with big-time performance and outstanding demand in sales across the country. Four sons sell.

We purchased this bull from Connealy Angus in Nebraska and he turned out to be one of the best sires we have used in recent years. He is truly a sire that will stand up with any AI sire in the country you want to compare him to. We still use him AI and ET because of his exceptional daughters and carcass traits. Study his EPD profile and find you can't find a big hole and that is hard to do with as many traits that are measured today. He is on the right side of breed average for every trait but four values. These are the kind that keep you in the cattle business from all perspectives. Eight sons and one daughter sell.

Security calves have continued to impress as they have come through the weaning and into the yearling stage. As a group we are extremely impressed with these cattle. They are so smooth made and standout cattle in the pen with extreme calving ease. He has that rare combination of outstanding phenotype and strong genetic information combined with pedigree excellence. His mother stems from the Pride cow family that has produced so many herd bulls, one of which is the GENEX favorite Turning Point. He is a bull that needs used more in the future and we think his sons will be very popular. Seven sons and five daughters sell.

Tahoe is arguably one of the most complete Angus bulls in the breed. He ranks in the top 1% of the breed for CED and top 10% for WW and YW all while adding body, fleshing ability and base width. He will improve MARB and REA while adding eye-appeal, dimension and improving feet and udders. Few sires can match his combination of calving ease, performance, maternal traits and carcass merit all while improving type and longevity. Seven sons and five daughters sell.

Progeny from the first three calf crops by Alternative placed him among the top 20 sires for progeny registered in 2021 and they have headlined Angus sales across the nation in 2020 and 2021. Alternative was the top-selling bull of his calf crop at Baldrige Brothers when two-thirds interest of him sold for \$120,000 in 2018. We find his sons and daughters to be the kind to rise to the top of the crop with lots of power and shape. Five sons and two daughters sell.

30 YEARS AND STILL
REMEMBERED

230 PICK OF FLUSH 2024 BULL SALE

- Once again we will be offering a pick flush of the entire group of first calf heifers. You will have the opportunity to choose from over 120 head of females and almost all of them will have a calved by sale time. This group will also include the first daughters of Key West, 0195, and Real Deal calving along with what we feel is our best set of young Angus cows yet. It is a perfect time to come and look at these females during the bull sale as they are close to the sale site and it is always a fun time to look them over and see the new crop of young donors. Some of our best donor cows have heifers calving in this group and we are excited to see what they will look like. We would like for you to select a donor by mid March at the latest and we set her up to flush with our donors first part of April.
- 1) Guarantee a minimum of 6 grade one embryos. Any less than 6 will be prorated back to the buyer.
 - 2) Buyer will receive all of the embryos from this flush.
 - 3) Buyer will be responsible to pay flush and freeze cost and shipping of the embryos.
 - 4) Any of the sires Colyer Herefords owns can be used free of charge.

SEXED HEIFER PREGNANCY

Due 08.23.2024

CHURCHILL W4 SHERMAN 2157K ET (44378036) X C BAR1 BAILEES DOUBLE MILES ET (43889970)

- These will be stout powerful performance cattle without a doubt. The first Sherman calves will be hitting the ground soon and by sale time we should have many of them to inspect. 8105 passes so much shape and power to her offspring.

CHURCHILL W4 SHERMAN 2157K ET

C BAR1 BAILEES DOUBLE MILES ET

278

SEXED HEIFER PREGNANCY

Due 08.23.2024

CHURCHILL W4 SHERMAN 2157K ET (44378036) X C D83 MILES 1266 ET (44293626)

- This will be a fun mating with the newest addition herd sire Sherman who has the carcass quality and growth. 1266 is many times champion including the 2023 Reserve overall female at the Cattlemen's Congress.

CHURCHILL W4 SHERMAN 2157K ET

C D83 MILES 1266 ET

279

SEXED HEIFER PREGNANCY

Due 08.23.2024

C DENALI HD 2105 ET X C 8257 VALERIE 1030 ET (44258289)

- This mating should produce a female that has all the things we are looking for. The performance and power from Denali and the look, balance and carcass traits from this great young validated donor 1030.

C DENALI HD 2105 ET

C 8257 VALERIE 1030 ET

280

SEXED HEIFER PREGNANCY

Due 08.23.2024

C CUDA BELLE 2111 (44359805) X WSF D320 MIRA H47 ET (44162314)

- We are excited about what 2111 will do for us because he has so much of what this breed needs. Great marking and low birth genetics with generations of proven carcass traits. This mating with donor dam H47 should be perfect when she adds her extra phenotype and look.

C CUDA BELLE 2111

RAVEN REPUBLIC 1564 (20143727) X CCC RENOWN 7060 (18845474)

- We are really happy with this first crop of Republic calves. We thought enough of them to flush our best angus donor 7060 to him and try to get some females that will carry us into the future. This should be a great mating and a future donor.

• Arlo was the lead-off bull in our Denver 2023 Champion Pen of Bulls. He was one of the most talked about young calves we have ever raised. After that he was the high selling bull in our 2023 sale for \$165,000 to Hoffman Herefords, Nebraska and Buck Cattle, Oklahoma. One week later we held a special auction for semen sales where he more than paid for himself in one night selling over 600 units for a gross of \$270,000. This young sire is exciting on many levels. He has the structure and build to put him in the same conversation as Miles but this one has the color and pigment along with the carcass traits to make him the next level of genetic capability.

Owned with Hoffman Herefords, NE and Buck Cattle, OK

- High selling bull in the 2022 National Hereford Sale at \$325,000 for 1/4 interest valuation. Guardian brings the power, performance, phenotype and carcass merit unmatched in the Hereford breed. 85 lb. birthweight, 924 act. WW, 964 adj. WW with no creep and weighing 1,315 lb. at exactly 10 months. Dam is a full sister to Belle Heir with a WWR of 108 on two head. Her individual IMF ratio is 152 and her first calf scanned an IMF ratio of 152 and ribeye ratio of 105. Grandam is by the \$600,000 Miles McKee and dam is the \$117,000 89T. She boasts an IMF of 124 and ribeye ratio of 103 on 24 progeny. A limited amount of semen will be sold and only offered at auction.

Owned with GKB Cattle, Iron Lake Ranch, Schrammel Cattle Co. and Randy Ward.

• Belle Heir is currently in the top 10% of the breed for 13 traits. Rarely does a young herd bull surface that does so many things right for the industry. He has been used successfully on heifers providing calving ease and light birthweights. His calves show explosive growth and have structural integrity and extra pigment. The carcass figures rank him among the breeds elite. He is currently enrolled in the National Reference Sire Program. He is so impressive to look at in the breeding pasture because of his massive build and his structural soundness. He has the extra pigment and dark red color that are demanded in today's industry. His first daughters calved in the spring of 2022 and they are very impressive.

• This young sire proved to be very useful when calving and breeding replacement females last spring. He is out of a first calf heifer that made it straight to the donor pen. Use this one for udder quality and calving ease but also his carcass values and look makes him a big time herd sire. Breeders around the country are excited about the calves by Key West.

• The first set of bulls being offered by 9490. The females sold last fall in the female sale were well received. A bull sired by 9490 was recently named the 2023 Grand Champion Horned Bull at the Western States Hereford Show in Reno. He provides so much look and power to a cross. Not many have discovered this bull yet, but after you see more of his offspring, we feel his semen will be in demand.
